ABOUT

I'm a UI/UX designer with about four years of work behind me, the last year and a half fully in product design. I design web and mobile products from the first user flow and wireframe through to prototypes, design systems, and developer handoff. I started in graphic design, so visual detail matters to me, and I've built interfaces in React, so I design with a clear idea of what developers can build.

EXPERIENCE

UI/UX Designer, Top Parent · New Delhi · May 2025 to present

- Design web and mobile screens, from user flows and wireframes to final UI and clickable Figma prototypes.
- Maintain the design system: the components and UI patterns the team reuses, which keeps screens consistent and makes handoff quicker.
- Review existing flows for usability problems and simplify the ones where users drop off.
- Check feasibility with developers and product early, then follow the build to make sure it matches the design.

Frontend Developer, Emiza Supply Chain Services · Gurugram · Oct 2024 to Apr 2025

- Built interfaces for the warehouse management system, billing, and the seller portal in React and TypeScript.
- Wrote reusable components and the data visualisations used in daily warehouse workflows.
- Fixed more than 50 UI, API, and pagination bugs.
- Worked with stakeholders and other teams to get features into production.

Frontend Developer Intern, Pocket FM · Bengaluru · Jul 2024 to Oct 2024

- Built reusable components with React, TypeScript, Tailwind CSS, and shadcn/ui.
- Converted JavaScript components to TypeScript and cleaned up inconsistent UI.

Graphic Designer, various companies · Gurugram · Feb 2019 to Jul 2021

- Made digital creatives, presentations, infographics, and motion graphics for different clients.

PROJECTS

All four projects below are solo work, designed by me.

Brokrs House, real estate mobile app (Figma)

- Designed the property search, discovery, and filter flows for three kinds of users: brokers, builders, and buyers.
- Worked out how each group finds, lists, and narrows down properties, and kept the app's screens and patterns consistent.

Shyam Jagat, organisation website (responsive web)

- Organised a large amount of content into a clear structure and navigation, so visitors can find things quickly.
- Designed the layouts to work across desktop and mobile screens.

ClickCard, digital business card with an admin dashboard (web app)

- Designed the admin dashboard: data tables, filters, forms, and workflows that change by user role.
- Built the components on a shared design system so new screens could reuse them.

Café website with QR ordering (web app)

- Designed the customer side: scan a QR code, browse the menu, and place an order in clear steps.
- Designed the admin panel the café uses to manage menu items and incoming orders.

SKILLS

Research and UX: user research, user flows, information architecture, wireframing, prototyping, usability testing, heuristic evaluation

UI and product: visual and interaction design, design systems, responsive design, typography, accessibility, developer handoff

Tools: Figma, FigJam, Canva, AI-assisted design with ChatGPT and Claude

Frontend: React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, shadcn/ui

EDUCATION

B.Sc. Animation and Visual Graphics, Amity University, Gurugram · 2017 to 2020

CAREER BREAK

Jul 2021 to Jun 2024. I spent these three years preparing for the Civil Services exams and studying on my own. I came back to design and development in July 2024.
